

LeChiffre XAUUSD signals: timeframe comparison

All PnL figures are as quoted in the daily Telegram summary reports, on a 0.1 lot (XAUUSD; currency assumed USD).

Timeframes compared: 3m, 5m, 15m, 30m and 4H. Data: 144 daily reports from 31/07/2026 to 29/09/2026. The best value in each column is highlighted in yellow (higher is better, except losses, losing days, max drawdown and rank).

Range = overlap of every timeframe's first-to-last report dates: 5m only starts on 02/09/2026 and 30m's last report is 28/09/2026.

Definitions. A "day" is a date with a daily report for that timeframe; dates without a report are not counted as zero-PnL days. Avg PnL / day = total net PnL ÷ days reported. Profit factor = sum of positive daily PnL ÷ |sum of negative daily PnL|. Max drawdown = largest drop of the cumulative daily PnL curve from its running peak (curve starts at 0). 4H has few reports (10 overall, 3 in the common range), so its statistics rest on a small sample.

Charts

Lines start at each timeframe's first report. The shaded band marks the common date range.

Appendix: daily net PnL matrix

Net PnL per report date and timeframe (blank = no report). Cumulative columns carry the running total forward from each timeframe's first report.
