Deep Moral AI (DMAI) is a global collaborative research, policy, and thought leadership initiative dedicated to advancing a new generation of artificial intelligence that is not only intelligent but also ethical, meaningful, human-centered, and wisdom-centered. Founded within the intellectual tradition of the Market-Made School of International Relations (MMSIR), DMAI explores the intersection of artificial intelligence, morality, spirituality, and human flourishing.

The Vision of DMAI is to establish a future in which artificial intelligence empowers a wiser, more just, and more meaningful human civilization. Its mission is to advance interdisciplinary research, global dialogue, and practical frameworks that integrate intelligence, morality, and spirituality into the design, governance, and application of artificial intelligence.

Deep Moral AI (DMAI): Building the bridge between intelligent machines and a more moral, meaningful, and human future.
